Professional Experience

Google – YouTube **Aug 2025 – Present**
Software Engineer *San Bruno, CA*

- Designed and implemented C++ backend functionality to automate ranking and selection of digital products using revenue data and business rules.
- Developed a distributed data-processing pipeline to reconcile product entitlements using Google's Flume and Spanner infrastructure.
- Owned design, implementation, and deployment of substantial components within production services, integrating RPC interfaces and debugging production issues.
- Contributed to international product launches, supporting the expansion of YouTube Live functionality across multiple markets.

SESCO Enterprises **Summer 2025**
Software Engineering / Quantitative Research Intern

- Optimized computational routines within internal electricity-grid modeling software, focusing on runtime performance and cache efficiency.
- Researched algorithmic and computational approaches to improve the efficiency of grid forecasting and simulation.
- Investigated and designed a Rust-based replacement for Python market-data parsing infrastructure to improve processing efficiency.

Dimensional Insight **Summer 2024**
Software Engineering Intern

- Optimized large-scale file retrieval in C, reducing frequent-query processing times from approximately five minutes to seconds.
- Designed and implemented C/C++ encryption functionality for secure customer-side storage of sensitive data.

General Motors – Corvette **Summer 2023**
Software Engineering Intern

- Developed software for Corvette manufacturing systems, contributing to an estimated 7% reduction in production delays within the affected process.
- Implemented vehicle drive-load sharing functionality and redesigned production-floor interfaces to improve diagnostics and monitoring.

MIT AeroAstro Research Laboratory **Feb – Dec 2022**
Computer Engineering Intern

- Developed software translating microscopic 3D designs into custom G-code for high-precision additive manufacturing.
- Modified printing hardware and analyzed energetic-material samples using spectroscopy to support propulsion research.

Education

Massachusetts Institute of Technology **May 2025**
S.B. Mathematics; S.B. Computer Science and Engineering *Cambridge, MA*

GPA: 4.8/5.0
Selected Coursework: Deep Learning, Natural Language Processing, Machine Learning, Algorithms, Computer Systems Engineering, Software Performance Engineering

Technical Skills

Languages: C++, Python, C, Julia

Systems & Tools: RPC Services, Flume, Spanner, Git, Linux, Valgrind

Machine Learning: PyTorch, TensorFlow, NumPy, Numba

Activities

MIT Varsity Heavyweight Crew (Division I); MIT Poker Club; MIT Chess Club
